office to book: 53418188

This Introductory Field Day is run by an Australian Demeter Biodynamic Trainer. Completion of the day qualifies participants for membership of BD Growers Australia (BDGA). The day is split between theory and practice:

A brief introduction to the history and practice of Biodynamics in Australia and an outline of the Demeter BD Method.

This is followed by the construction of a BD Compost Heap, including the insertion of the full set of Compost Preparations. Practical instruction continues with management of high-quality Australian Demeter BD preparations - their storage, stirring and application. Successful completion of this practical section of the day qualifies participants for membership of BDGA and future support in applying the method.
