

SHORT COURSE FOR ADULTS

LEARNING TO LOVE NUMBERS

"Mathematics is a place where you can do things which you can't do in the real world."

— MARCUS DU SAUTOY

MATHS. ARE YOU SCARED OF IT? ARE YOU QUIETLY INTRIGUED BY IT? HAVE YOU ALWAYS BEEN INTERESTED IN IT BUT NEVER HAD THE OPPORTUNITY TO EXPLORE IT? WOULD YOU LIKE TO LEARN TO LOVE IT?

If you answered "yes" to any of these questions you might consider my 6 week "kitchen-table" course of instruction and discussion designed to help you fall in love with the foundation of all mathematics – numbers!

In this course you will explore mathematics as a human language, how it does not need to be cold and calculating but can and should be an expression of a warm, imaginative and living thinking. You will discover just how "playful" numbers can be and encounter how the language enabled by numbers points to and reveals the hidden, creative forces of nature. Led by Jeff Onans, an educator with over 40 years of experience, the course runs over six weeks, with one two-hour session held every week in Campbells Creek.

There will be NO "sums", tests or confronting equations – just inspiring ideas and conversation over an endless cups of tea, coffee or warm beverage of your choice!
